

GRIGORIY VOYAKIN

Applied AI Engineer | Multimodal AI Systems & Generative Media

+7 913 529 8090 • grigoriyvoyakinwork@gmail.com • [LinkedIn](#) • [GitHub](#) • [Telegram](#) • [Interactive CV](#) • [Geni AI Bot](#)

Summary

Applied AI Engineer with 7+ years of experience across software engineering, visual production, automation, and AI product development. I have led teams and technical initiatives, mentored specialists, taken ownership of complex projects, and worked directly with clients and cross-functional stakeholders. I combine engineering depth, product thinking, and strong visual judgment developed through film and advertising to translate ambiguous requirements into practical, reliable, and user-focused solutions. I am deeply passionate about AI and emerging technologies and tend to immerse myself fully in both learning and building with them.

My expertise spans multimodal and generative AI, image and video pipelines, computer vision, LLM/VLM applications, model training and evaluation, and human-in-the-loop systems. I have built AI products, PyTorch training and evaluation pipelines, multimodal quality-assessment systems, production workflows, and GPU inference services - covering the full path from research and experimentation to integration, deployment, evaluation, and real-world iteration.

Core Skills

Applied AI & ML: Python • PyTorch • NumPy • Pandas • scikit-learn • Model Training & Fine-Tuning • Evaluation • Experiment Design • TensorBoard

Multimodal & Generative AI: Image & Video Generation • Diffusion / Flow Matching • Computer Vision • LLM / VLM Applications • LoRA • ComfyUI • OpenCV • MediaPipe • YOLO • FFmpeg • CLIP / DINOv2

AI Systems & Automation: Human-in-the-Loop Systems • Agents & Tool Use • LangChain • RAG • Structured Outputs • Visual QA • Workflow Automation • n8n • MCP

Product Engineering: FastAPI • React / Next.js • SQL / PostgreSQL • Supabase • REST APIs • Webhooks • Product Prototyping • UX / Product Flows • Figma

Infrastructure & Deployment: Docker • RunPod Serverless • AWS • ONNX • Hugging Face • Model Serving • VPS / Self-Hosting • Git • Linux • CI/CD Fundamentals • Monitoring

Selected Work

Human-in-the-Loop Generative ML Lab - PyTorch DDPM/SiT/REPA training, controlled evaluation, experiment tracking, and supervised agent workflows.

Visual Quality Gate - Multimodal visual QA with guide compliance, structured verdicts, offline evaluation, and cost tracking.

YOLO11 Hard Hat Detection - Reproducible detection pipeline with data audit, fine-tuning, held-out evaluation, error analysis, and 0.943 mAP50.

Grounded RAG Agent Lab - LangChain/Chroma question answering with citations, retrieval and answer evaluation, and unsupported-question refusal.

Product Conversion ML Case - Classical ML with leakage controls, group-safe validation, imbalanced metrics, and decision-threshold analysis.

Geni AI - Solo-built Telegram generative AI product with frontend, workflows, payments, infrastructure, telemetry, and analytics.

Education

Bachelor of Science in Software Engineering | Siberian State Aerospace University | 2016 - 2020

Languages | English - B2 | Russian - Native

Experience

Founder / AI Product Builder | 01/2026 - Present

Geni AI | Personal AI product

- Building and operating an AI-powered WebApp inside Telegram, owning product direction, user flows, frontend development, backend workflows, infrastructure, and deployment.
- Designed and launched AI-powered scenarios, prompt-library workflows, publishing tools, analytics, pricing logic, and internal operational systems.
- Iterated on product usability, retention, and monetization based on real user behavior, balancing technical feasibility, product clarity, and development speed.
- Alongside the product, developed independent applied ML projects covering PyTorch model training, generative-model evaluation, classical ML, multimodal quality assessment, and human-in-the-loop workflows.

AI Technical Artist / Generative AI Developer | 04/2025 - 12/2025

Prequel

- Researched and evaluated image and video generation models, workflows, and product-oriented use cases.
- Built reusable ComfyUI workflows for generation, editing, reference-based control, upscaling, and production image and video tasks.
- Integrated computer vision tools for detection, segmentation, pose estimation, masking, and image processing using existing models, MediaPipe, and custom ComfyUI nodes.
- Worked with LoRA training, cloud GPU environments, model APIs, and serverless generative inference workflows.

AI Engineer / ML Researcher / Pipeline Artist | 08/2024 - 03/2025

Assethub Inc

- Built RAG and LLM-assisted workflows for domain-specific search, question answering, and access to internal production knowledge.
- Prototyped AI-assisted tools and automation, turning open-ended production requirements into testable product features.
- Developed computer vision and image-processing workflows and deployed inference endpoints for experimentation and internal use.
- Automated workflows connecting Houdini, Unreal Engine, web services, and AI tools, reducing manual processing and improving reliability.

Pipeline Artist / TD / Senior FX Artist | 03/2019 - 07/2024

CGF / Chemistry Film | Visual effects studios

- Developed procedural tools, simulations, and automation workflows for film, advertising, and cinematic production.
- Led technical problem-solving on complex visual tasks and created reusable solutions that improved production efficiency.
- Mentored artists and worked across technical and creative teams, building a strong foundation in visual quality, motion, lighting, and professional image-production workflows.
